

CATERINA LONGO

Caterina Longo is a board-certified Dermatologist specializing in the diagnosis and treatment of skin cancers.

Although providing the best care possible for patients remains her primary goal, she also committed to education and clinical research. She is actively involved in clinical research and she has published numerous papers on topics related to skin cancer with an emphasis on melanoma, atypical nevi, Spitz/Reed nevi and non-melanoma skin cancer.

Her research interests are focused on the use of imaging instruments such as dermoscopy, and confocal laser microscopy to recognize skin cancer early in its development. She pioneered the use of ex vivo fluorescence confocal microscopy for micrographic Mohs surgery applied for basal cell carcinoma and other visceral tumors. She frequently lectures on these topics both nationally and internationally being the second Author publishing on this topic (source Scopus) for a total of 250 papers.

She is appointed as Associate Professor at University of Modena and Reggio Emilia, Italy.
